

Direct models and decoding-time composition

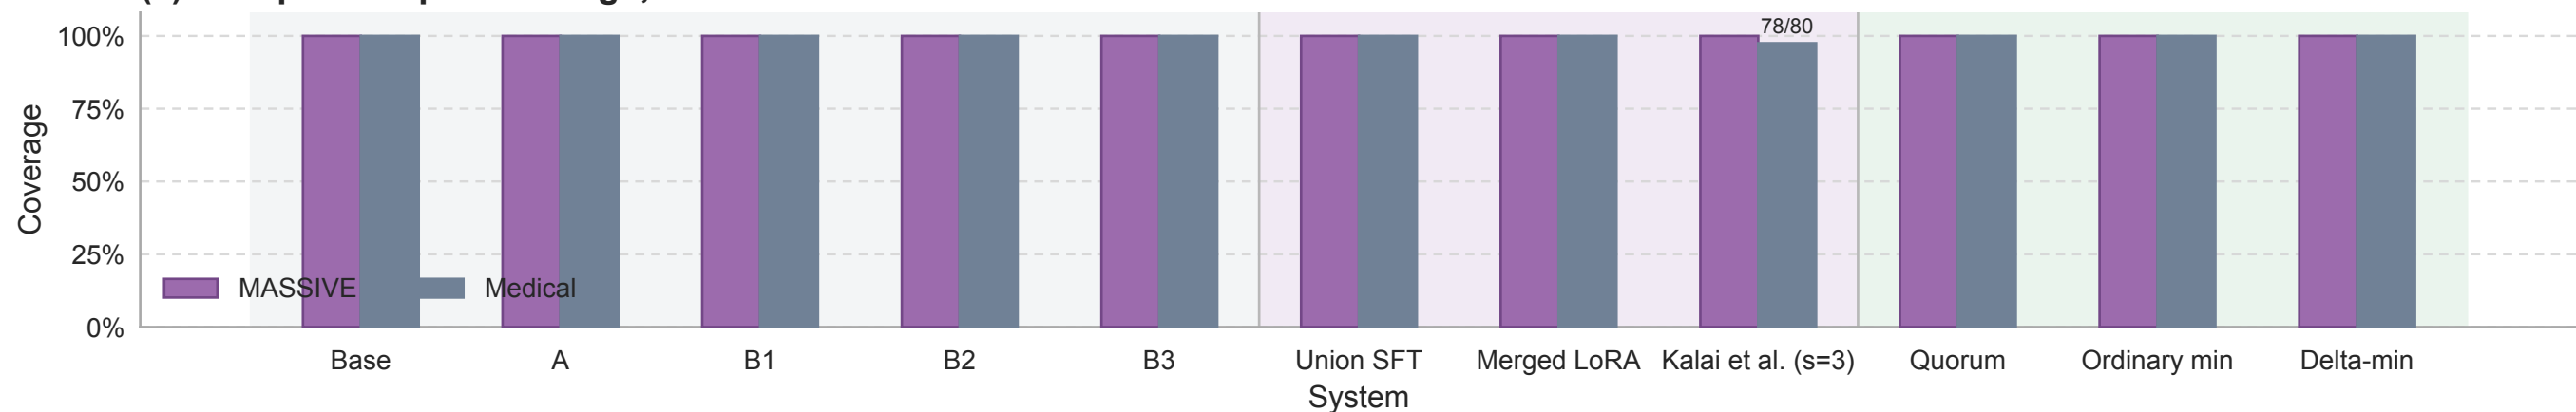

(a) MASSIVE task capability (contextual baseline rates are conditional on acceptance)

(b) Medical outcomes (contextual baseline rates are conditional on judged acceptance)

(c) Accepted-output coverage; abstentions are not recoded as medical outcomes

Purple contextual-baseline bars are post-hoc comparisons and do not enter the frozen primary gate. Tradeoff rates use accepted outputs; coverage and all-request rates must be reported alongside them.
